ACKNOWLEDGEMENTS

A thesis is not written in isolation, and being a Ph.D. student involves a lot more than just writing a thesis. In this light I would like to thank the following people (and apologize in advance to anyone I may have overlooked):

- Emmanuel Chevallier, Jesus Angulo and Fernand Meyer, as well as others from the CMM, for a very pleasant and fruitful exchange of ideas and knowledge. I have especially fond memories of my (often long) discussions with Emmanuel on topics ranging from total orders and Riemannian submersions to the merits of dubbing vs. subtitling.
- Mikola Lysenko for sharing my passion for web-based science, as well as a very fruitful collaboration, not to mention having been an excellent host. Thanks also go to his room mates and supervisor for helping make our collaboration possible and putting up with our discussions for the better part of a week.
- André Offringa for putting me on the track of the SIR operator, and as a result, path-based operators, not to mention being an awfully good sport about having to wait about three years for me to finally find the right way of presenting our find.
- Remco Renken, Jelmer Kok and Michiel Pijnacker Hordijk, as well as several nameless others, for being willing to think about what could be done with morphological filters on (DTI) data, before they even existed (as well as helping me try out some of them).
- Remco Duits and various others from the TUE, for numerous inspiring discussions. You really broadened my horizons, and served as an excellent sounding board.
- The people from the SVCG (and the JBI in general) for supporting me in all sorts of ways, listening to my presentations, bearing with me during lunch discussions, not complaining about hours-long discussions on esoteric subjects, and just in general making my time at the RuG extremely pleasant.
- Michael Wilkinson for always being available, as well as for many stimulating discussions.
- Jos Roerdink for being a truly exemplary supervisor. He gave me an incredible amount of freedom and some amazing opportunities for interacting with other researchers, while letting me benefit from his experience and (very) keen eye for detail.

ACKNOWLEDGEMENTS

- My parents, for not just being extremely supportive, but also for being very pleasant housemates during the last year.
- Nolda for listening to my endless stories about complicated algebraic structures, tensors and other assorted concepts that would even make many of my colleagues cringe.

I would also like to thank the reviewers of various papers, and especially the reviewers for my submission to ASCI.Open 2013, as they managed to spot problems that had gone unnoticed in the original version [100], and Chapter 3 is better because of this. In general, one cannot underestimate the value of a good review.
